How Law and Science Can Better Protect the Public’s Health

Friday, April 6, 2018  |  2:30-4 p.m.
002 Hermann Hall

Refreshments will be served at 2 p.m. before the lecture.

Carl F. Cranor
Distinguished Professor of Philosophy
Faculty Member, Environmental Toxicology Graduate Program
University of California, Riverside

Law and science are typically utilized to protect the public’s health from toxic substances, but both must be appropriate for the task and well administered. Based on his recently published *Tragic Failures* (Oxford, 2017), Cranor will discuss how administrative health laws and the tort or personal injury law, using needed science, can better protect the public.
